PROJECT :

CARGO MANAGMENTE SYSTEM –

This project deals with Cargo management System . This system deals with registering a parcel, tracking a parcel, and delivery of the parcel. This system is mainly used to handle a large volume (2000000) of parcel per day, find the optimum route for transferring the parcel, to increase the operational efficiencies, to increase the customer experience and reduce the operational cost. Employees can register the parcel and track the parcel. This process makes the Staff to track the parcel by using an id given to the Staff during the registration process.
